This invention relates to nucleic acid sequences AAF93744 - AAF93916
which encode human secretory or membrane proteins represented by
AAB88317 - AAB88419. Included in the Invention are primers
AAF893917 - AAF84295 and AAF62212 - AAF62235 which are used to isolate the
converse, which can be used in vections. The polynucleotides methods for
the production of antibodies directed against the proteins, and cDNA
sequences, which can be used in vaccines. The polynucleotide sequences
can be used in gene therapy. The polynucleotide sequences and the
corrections they encode may be used in the prevention, treatment and
diagnosis of diseases associated with inappropriate secretory
protein/membrane protein expression. The nucleic acids and complementary
correction/membrane protein expression and function of secretory proteins/membrane
corrections may also be used as DNA probes in diagnostic assays
corrections and also be used as DNA probes in diagnostic assays
corrected and their role in metabolism. The polypeptides may be used
consect to study the expression and function of secretory proteins/membrane
polypeptides and their role in metabolism. The polypeptides may be used
as antigens in the production of antibodies against them and in assays to
dentify modulators (agonists and antagonists) of expression and
activity. The antibodies and antagonists may also
corrected agents to down regulate expression and activity. The antibodies may also
corrected agents for detecting the presence of the
colypeptides in samples (e.g. by enzyme linked immunosorbant assay
corrected and diabetes.

Corrected and diabetes. gene therapy or as candidate target molecules in drug development -Claim 1; SEQ ID 8; 609pp + CD ROM; English.

New nucleic acids encoding human FK506 binding proteins

Claim 12; Fig 3; 87pp; English.

The present sequence represents human FK506 binding protein 65 (FKBP65).

The polypeptide or polynucleotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells, including the pluripotent stem cells, in an effort to treat those disorders associated with a decrease in certain types of hematopoeitic cells. They can be used to modulate in certain types of hematopoeitic cells. They can be used to modulate in certain types of hematopoeitic cells. They can be used to modulate coagulation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, trauma, surgery or other causes, or a decrease can treat heart attacks, coher respiratory problems, anaphylaxis, hypersensitivity to an antigenic cother respiratory problems, anaphylaxis, hypersensitivity to an antigenic cother respiratory problems, anaphylaxis, both chronic and acute, including inflammation associated with infection, ischemia-reperfusion injury, endediction or strakes, or commonatibility, organ rejection or graft versus conditions will all the complement-mediated hyperacute rejection, conditions, both chronic and acute, including inflammation associated with infection, ischemia-reperfusion injury, endecrease, or crown, sethabality, arthritis, complement-mediated hyperacute rejection, the particular, fungal and parasitic infections.

```
Neurotrophic factor expression-inducing agent, applicable in developing drugs for neural diseases e.g. dementia, cerebral embolism, spinal injury and peripheral nerve diseases by screening their regulatory effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    423
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             413
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              473
                                                                                                      The present sequence represents a human neurotrophic factor expression-inducing agent. The polypeptide is designated PSEC56. The PSEC56 protein is used to increase nerve growth factor providing neurite outgrowth effect, which is applicable in developing drugs for neural diseases e.g. dementia, cerebral embolism, spinal injury and peripheral nerve diseases, with use of PSEC56 as the neurotrophic factor expression-inducing agent which can be applied in a system to study induction and secretion mechanism of neurotrophic factor.
                                                                                                                                                                                                                                                                                                                                                          116 AYGNERVSGVIPPNSVLHFDVLLMDIWNSEDQVQIHTYFKPPSCPRTIQVSDFVRYHYNG 175

Secretory proteins play important roles in the proliferation control, the differentiation induction, the material transport and the biophylaxis of cells. Membrane proteins have important roles as signal receptors, ion channels and transporters. The present sequence is a human protein which has at least one hydrophobic domain. This protein may be a secretory or a membrane protein. The present protein may have cytokine and cell proliferation/differentiation activity, immune stimulating or suppressing activity, haematopolesis activity, tissue growth activity, and tunoun and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic inhibition activity. The present protein could therefore be used for treatment of autoimmune disease, Alzheimer's disease, Parkinson's

This sequence represents human isomerase homologue-1 (HIH-1).

CC Nucleotides encoding HIH-1 were first identified in an ovarian tumour CC Nucleotides encoding HIH-1 were first identified in an ovarian tumour CC CDNA library, the CDNA encoding this sequence being a consensus. HIH-1 is also expressed in other cancerous *cissues, lymph nodes, inflamed CC colon, and synovium. HIH-1 has chemical and structural homology with couse FREPSE, sharing 8% identity as well as the isomerase signature sequence, the endoplasmic retriculum targetting sequence and many of the potential phosphorylation sites. FKEPS (FK506 binding proteins) are a consense of family of peptidyl-proly cisyl-furans isomerases (PPISES) which catalyse CC family of peptidyl-proly cisyl-furans isomerases (PPISES) and crashlyse cc the cis to trans isomerisation of certain proline imidic bonds in CC proteins. FKEPS can bind the potent immunosuppressants FK506 and crapamycin, inhibiting PPISES activity and thus blocking stynalling pathways in T-cells. The expression pattern of HIH-1 and its homology with FKEPSE indicate that it plays a role in cancers (e.g., asthma and catherosclerosis). HIM proteins, and the nucleotides that encode them, may be used for the diagnosis, treatment or prevention of such diseases. HIM condour activity, and to raise antibodies. The antibodies and antagonists of anyoptosis, and the antibodies may also be used in detection of HIM moleotides may be used to downregulate expression and/or activity and increase condours and diagnosis of associated diseases. HIM mucleotides may be used in gene therapy or in the production of recombinant protein represent
                                                                                                                                                    "Phosphorylated by cAMP/cGMP-dependent protein kinase"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding human isomerase homologs useful for the prevention, diagnosis and treatment of cancers and immune disorders

New nucleic acids encoding human FK506 binding proteins

Claim 12; Fig 4; 87pp; English.

The present sequence represents a human FK506 binding protein 65

(FKB65). It is a splice variant of the sequence given in AAX86147.

The polypeptide or polymenteotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. They may be useful in treating or detecting deficiencies or calls. They may be useful in treating or detecting deficiencies or proliferation of hematopoietic cells, to increase differentiation and proliferation of hematopoietic cells including the pluripocent stem cells, in an effort to treat those disorders associated with a decrease in certain types of hematopoeitic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood coagulation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, etcokes or scarring. They can also treat autoimmune disorders, allergic reactions and conditions such as actima (particularly allergic asthma) or other respiratory problems, anaphylaxis, hypersensitivity to an antigenic molecule, or blood group incompatibility, organ rejection or graft versus host disease, inflammatory conditions, both chronic and acute, including inflammation associated with infection, ischemia-reperfusion injury, endotoxin lethality, arthritis, complement-mediated hyperacute rejection, nephritis, orthrine or chemokine induced lung injury, inflammatory bowel disease, or Crohn's disease. They can also be used to treat viral, bacterial, fungal and parasitic infections.

                                                                                                                                                                                                                                                                  15-JUL-1999.
AAY2388
```

The present sequence represents a human FKS06 binding protein 65

(FKBP65). It is a splice variant of the sequence given in AAX86145.

The polypepited or polynucleotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemotaxis) of immune cells. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells, to increase differentiation and proliferation of hematopoietic cells including the pluripotent stem cells, in an effort to treat those disorders associated with a decrease in certain types of hematopoeitic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood coagulation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, strokes or scarring. They can also treat autoimmune disorders, altergic reactions and conditions such as asthma (particularly allergic asthma) or other respiratory problems, anabyllasis, hypersensitivity to an antigenic molecule, or blood group incompatibility, organ rejection or cor other respiratory problems, anabyllasis, hypersensitivity to an articlemic molecule, or blood group incompatibility, organ rejection or complement-mediated hyperacular neglection, inflammatory conditions, both chronic and complement-mediated hyperacular rejection, nephritis, cytokine or chemokine induced lung injury, inflammatory bowel disease, or cohn's disease, or complement-mediated byperacular rejection, bacterial, fungal and conditions in the process or search or conditions or complement-mediated byperacular rejection, nephritis, cytokine or chemokine induced lung injury, inflammatory bowel disease, or crohn's disease, they can also be used to treat viral, bacterial, fungal and parasitic infections.

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to proteins, called pancreatic cancer antigens have cytostatic, cardiant and antiantacy, relaxant, contraceptive, courrective, nootropic, immunomodulatory, relaxant, contraceptive, courrective, nootropic, immunomodulatory, relaxant, contraceptive, conversing, cardiant and antianflammatory activities, and can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and exceptibility to one in a conversion or be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer.

Conversion and antagonists to the antigens can be screened for. The pancreatic cancer antigen polymucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage cand diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypetides, including contine or be used to treat or prevent neural; immune system, muscular, creproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. AAC99212 to AAC99240 and AAB54467 represent cycles.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360 DMDLNKDGEVPPEEFSTFIKAQVSEGKGRLAMPGQDPEKTIGDMFQNQDRNQDGKITVDEL 419

Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases

Claim 11; SEQ ID No 2257; 2922pp; English.

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP4328) and to cDNAs encoding them (ABQ54131-ABQ56315), and also encompasses polypeptides 90% identical and polybuclectides 95% identical to the sequences of the invention. The invention additionally relates to excombinant vectors and host cells comprising human ovarian antigens, and the use of ovarian antigens, and host cells comprising human ovarian antigens, and the use of ovarian antigens, and host cells comprising human ovarian antigens, and the use of ovarian antigen polymuclectides and polypeptides in diagnosing or preventing various ovary and/or breast-related disorders (e.g., infertility, disorders of pregnancy, anovulation, prognosing or preventing various ovary and/or breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system of bloodvers (e.g., infertility, disorders, and dysmenorrhoea), endocrine disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic of immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus, tempiratory disorders (e.g., anaemia), cardiors oophoritis, and acquired inferior disorders, neurological disorders gastrointestinal disorders and uniary system disorders. Ovarian antigen polypeptides and conditions of individuals and in forensic analysis, and the collymuclectides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymuclectides may also be used in screening for compounds which independent of individuals and in forensic analysis, and the collypeptides may be used as food additives or to prepare antibodies desquence represents a human ovarian aftigen of the invention. The polymuclectides was cheared and prepare antibodies of the promoter of the sequence data for this parent did not form part of the printed or the sequence data for this parent did not form part of the promoter of the fire of the promoter of the fire of the fire of ftp.wipo.int/pub/published_pct_sequences.

polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polymorleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity at ftp.wipo.int/pub/published_pct_sequences 1241 AA; Sequence

The prostate cancer antigen polymucleotides may be used for detection of prostate cancer, chromosome infantification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, dispatchintestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAP16506 to AAP16514 to AAB57303 represent sequences used in the exemplification of the present
                                                                                                                                                                                  to AAF16505 encode the human prostate cancer associated called prostate cancer antigens, given in AAB56363 to AAB57302.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; FK506 binding protein; FKBP65; immune system disorder; immune cell; hematopoietic cell disorder; thrombolytic activity; blood platelet disorder; wound; blood coagulation disorder; blood platelet disorder; wound; heart attack; stroke scarring; autoimmune disorder; allergic reaction; asthma; allergic asthma; respiratory problem; anaphylaxis; hypersensitivity; blood group incompatibility; organ rejection; graft versus host disease; inflammatory condition; ischemia-reperfusion injury; endotoxin lethality; arthritis;

```

The present sequence represents human FK506 binding protein 65 (FKBP65).

The polypeptide or polymucleotide may be useful in treating deficiencies or disorders of the immune system, by activating or inhibiting the proliferation, differentiation, or mobilization (chemocaxis) of immune cells. They may be useful in treating or detecting deficiencies or disorders of hematopoietic cells, to increase differentiation and proliferation of hematopoietic cells including the pluripotent stem cells, in an effort to treat those disorders associated with a decrease in certain types of hematopoietic cells. They can be used to modulate hemostatic or thrombolytic activity, e.g. an increase can treat blood conquisation disorders, blood platelet disorders or wounds resulting from trauma, surgery or other causes, or a decrease can treat heart attacks, trocks or scarring. They can also treat autoimmune disorders, allergic reactions and conditions such as asthma (patricularly allergic activity to an antigenic molecule, or blood group incompatibility, organ rejection or graft versus host disease, inflammatory conditions, both chronic and acute, including inflammation associated with infection, isochemia-reportusion injury, nephritis, cytokine or chemokine induced lung injury, inflammatory bowel disease, or Crohn's disease. They can also be used to treat viral, bacterial, fungal and parasitic infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                         Human, cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                62 TVIIPPHLGYGEAGYDGEVPGSAVLMFDIELLELVAGLPEGYMFIWNGEVSPNLFEEIDK 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 <del>1</del>.8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             408 STWNLGKTYNIVLGSGQVVLGMDMGLREMCVGEKRTVIIPPHLGYGEAGVDGEVPGSAVL 467

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders c.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, system disorders e.g. Alzheimer's disease and amylogenesis, nervous system disorders e.g. Alzheimer's disease and cardicolar dimmunodeficiency virus (AIDS) and fundi, ocular disorders e.g. activitable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g. leukaemia, disorders e.g. nonallargic rhinitis, renal disorders e.g. malignancies, crespiratory disorders e.g. nonallargic rhinitis, renal disorders e.g. ceptides e.g. nonallargic rhinitis, renal disorders e.g. mycoraclial inferation. The polypeptides can also be used to aid wound healing and ceptihelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting call culture of primary tissues, to regenerate tissues and in chemotaxis. The colline, protein, increase or decrease storage capabilities, fat content, lipid, protein,

Patent No. 6090612

GENERAL INFORMATION:
APPLICANT: Medical Research Council
TITLE OF INVENTION: Adenylate cyclase and uses therefor
FILE REPREBRICE: P14716C

CURRENT APPLICATION NUMBER: US/08/894,173A

CURRENT FILING DATE: 1997-08-13

NOMPER OF SEQ ID NOS: 97

SEQ ID NO 69
; Sequence 69, Application US/09398193

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                peptidylprolyl isomerase (BC 5.2.1.8) - wheat
NyAlternate names: FK506-binding protein; peptidylprolyl cis-trans isomerase; Pplase
C;Species: Triticum aestivum (common wheat)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 21-Jul-2000
C;Accession: S5383

Cybecies: Vicia faba (fava bean)
Cybecies: Mall, A. 12090
A; Title: Molecular characterization of a FKBP-type immunophilin from higher plants.
A; Accession: T12090
A; Status: preliminary; translated from GB/BMBL/DDBJ
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Molecule type: Taba>
A; Constructerizations: VID: G1272409; PIDN: AAC49392.1; PID: G1272410
                                                                                                                                                                                                                                                                                                                                                                                                                                        A Gene: FKBP15
A;Note: inhibited by immunosuppressant drugs FK506 and rapamycin
C;Superfamily: BKBP-type peptidylprolyl isomeraes; BKBP-type peptidylprolyl isomeraes; BKBP-type peptidylprolyl isomeraes; immunoregulation
C;Keywords: cis-trans-isomerase; cyclosporin A binding; immunoregulation

Submitted (MAY-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: PPLASE THAT BINDS CALMODULIN.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
-!- INDUCTION: BY HEAT SHOCK.
-!- SIMULARITY: BELONGS TO THE FKBP-TYPE PPIASE FAMILY: CONTAINS 3
FKBP-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          160 PRTIQVSDFVRYHYNGTFLDGTLFDSSHNRMKTYDTYVGIGWLIPGMDKGLLGMCVGEKR

May function as a component of membrane cytoskeletal scaffols.
-!- CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.

May have a rotamase activity. May play a role in the intracellular trafficking of heterolologometric forms of steroid hormone receptors.

CATALYTIC ACTIVITY: CIS-TRANS ISOMERIZATION OF PROLINE IMIDIC PEPTIDE BONDS IN OLIGOPEPTIDES.
SUBUNIT: ASSOCIATES With HSP90 and HSP70 in unactivated steroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hormone receptor complexes. Also interacts with peroxisomal phytanoyl-coA alpha-hydroxylase (PHYH) (By similarity). SUBCELLULAR LOCATION: Nuclear and cytoplasmic. Prosphorylation by CK2 results in loss of HSP90 binding activity (By similarity). SIMILARITY: CONTAINS 2 FREP-TYPE PPIASE FAMILY. SIMILARITY: CONTAINS 2 FREP-TYPE PPIASE DOMAINS. SIMILARITY: CONTAINS 3 TPR REPEATS.
